## About Us

Endemic Environmental Services, Inc. is a renowned multidisciplinary environmental consulting firm that serves public and private sector clients. Our team members apply their scientific expertise, experience, initiative, and innovation to natural resource management.

**Our goal is to navigate environmental challenges with innovative solutions.**

## Differentiators

What sets us apart is our adaptive management approach that integrates ecological expertise with team-based training, honest accountability, transparent feedback, and rapid response support. We use a diversity of techniques and a specific restoration focus that allow us to provide tailored solutions to environmental projects. For example, new advancements in monitoring technology have allowed us to drive down costs while improving monitoring quality. Using our professional-grade aerial drone and pilot, EES can monitor dense vegetation areas, nesting bird activity, and restoration sites with minimal disturbance, cost, and human contact. Our scientific background enriches our management methodology, informs our restoration techniques, and allows us to conduct wildlife studies throughout California. Our partnerships with organizations such as ICRE, UCI Nature, and Laguna Canyon Foundation have allowed us to collaborate with a variety of local conservation projects for sensitive and protected species.
